Production for Week Ended:  
August 19, 1989

## Preface

The *Weekly Coal Production (WCP)* provides weekly production estimates of U.S. coal by State, as well as supplementary data which are usually published twice a month. This week's Coal Exports and Imports Supplement contains annual as well as detailed monthly data on U.S. coal and coke exports and imports. Another supplement contains detailed monthly data covering electric utility coal consumption, stocks, and receipts (quantity and price).

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as

specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution Report*, the *Quarterly Coal Report*, *Coal Production 1987*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202)586-8800*.

## Summary

U.S. coal production in the week ended August 19, 1989, as estimated by the Energy Information Administration, totaled 20 million short tons, about equal to the production levels for the prior week and the corresponding week of 1988. Production East of the Mississippi totaled 12 million short tons, and production West of the Mississippi totaled 8 million short tons.

U.S. coal exports in the first half of 1989 totaled 50 million short tons. This was 22 percent (9 million short tons) greater than in the same period a year earlier and ranked as the highest level in the first half of a year since 1982. Metallurgical coal accounted for most of

this increase (6 million short tons). Steam coal exports were up from the first half of 1988 by 3 million short tons. The higher levels of metallurgical and steam coal exports are the result, primarily, of increased European demand.

U.S. coal imports in the first half of 1989 totaled over 1 million short tons, approximately the same as in the comparable period of 1988. Colombia and Canada continued as the principal sources of imported coal, accounting for 44 percent and 40 percent of the total, respectively.
